

Exhaust sysytem

Posted by Chas - 2013/04/12 14:27

Any ideas on a na manifold & back box that would be nct friendly? Thinking of japspeed manifold but not sure on backbox... Japspeed, fujitsubo, mongoose or just standard. Thanks :rambo:

NCT is fussy with any exhaust that isnt stock, best thing to do is just keep the stock one for NCT and buy whatever exhaust you want for everyday driving.

Another thing you could do is shove a load of steel wool into your exhaust, just make sure you dont stick it in too far so u can pull it out later and then stop the steel wool from coming out with a silencer.
