

Boost Controllers

Posted by Padraig - 2014/02/25 23:29

Hi guys im looking to buy a boost controller

Can anybody advise me on what is the best make or type to get or would i be so lucky that some of ye guys might have one to sell ???

ive got the hks evc 4 and it hasnt let me down
i recommend an electronic one anyway

I have the HKS evc5 which is very good.

Like spla300 said go for an electronic one, there are plenty of good brands out there.

MBC (manual boost controller) from TwosRus

http://twosrus.com/catalog/product_info.php?products_id=62

Might take a while to get to you though.

50 dollars for a manual boost controller!!
Are they alright in the head?

If ur going manual get this one for 12euro
i started off with one of these, does the job but not as good as electronic one.

If you go for a manual controller you will need a boost gauge or how will you know what you are boosting.
I have a Gizmo EBC (the cheep one)has been 100% since I got it 4years ago and is easy to set up.
