

**Td04 fit rev3**

Posted by Murphy - 2015/09/25 21:29

---

Anyone know if a td04 turbo fit a rev3 engine straight on?

No and it's no bigger than a ct26 anyway

Just seen you're a rev3 . It's not an upgrade for a ct20b either. Take it you mean a tdo4 off a scooby?

Every turbo car has its own specific exhaust manifold and downpipe to fit its own turbo. Every car is different(few exceptions), you can't just bolt on a different turbo, it won't fit. You need a custom exhaust manifold and downpipe to run a different turbo from another car.

Your own turbo is capable of running up to 300 hp with supporting mods. Do you need more than that?

Take a look at the 3SGTE turbo kits on the ATS Racing website. They had a kit for the TD06, but that is discontinued - their Garret kit is very good.

<http://www.atsracing.net/Parts/Index/TURBOS>

BTW, if you haven't already seen it, take a wander through the 3sgte power primer - it covers a lot of the groundwork for how to get tasty power from a 3sgte:
