what happened, did you pop your ct26?

i hit 1.4bar before but im not sure how long it would last at that, 1.2 should be ok but id leave it at 1bar and have 1.2 set to scramble boost when you really need it.

ct20's are getting harder to find i bought an extra one to have there in case mine blows up.

I think that power fc is causing all your problems, you should get rid of it :P

Maybe we can do a deal :)
