

## gt-s traction control

Posted by busy93 - 2014/10/06 11:56

---

This a 1997 gt-s so ill assume rev4 & I've noticed other rev4 advertised with traction control. Is it built in or a button to press?????? <http://i.imgur.com/CBof6YO.jpg>

Toyota built in TCS and fully switchable on or off at the touch of a button (next to the fog light switches). There's a little yellow warning light on the dash when its switched off and personally, and I know many people have different ideas about the TCS system but I think its awesome :)

TRC was an optional extra from the factory so not all turbo cars had it. You can tell straight away if your car has it by looking at your engine bay. It looks like this...

<http://roguemotorsport.com/mr2gt/gts/pict0017.jpg>

<http://roguemotorsport.com/mr2gt/gts/pict0020.jpg>

And of course the lack of a TRC button in your cockpit would suggest you don't have it.

Is it hard to retro fit, is something I think'd be handy on a wet turboey day

So it's part of the throttle body sensor to Awell would have been nice extra to have. & u recon it'd be tricky to fit

I think it should be a simple plug and play as long as you have ABS.  
I would have bought it but it wont fit with my chargecooler setup.  
a lad here was selling the complete kit for 100euro  
here is the link his thread, the topic was closed but you could try pm him.
