

Rev5 (98-99) NA to Turbo Swap?

Posted by RR87 - 2016/03/11 10:41

Hi everyone,

As expected, I'm thinking about going back into MR2 ownership and wanted to know about a Turbo swap for a 98-99 MR2 NA? Standard Rev5 Turbos are not that easy to find.

Anyway, has anyone here done this swap before? What's required besides the engine/transmission? Would turbo axles be required as well?

I had a Turbo swap done in a 91 before and a few more things were needed besides the engine and transmission....so I thought I'd check if the same applies for a Rev5?

Any comments? Instructions?

=====

I would just be worried about emissions in the nct unless you can manage to find a rev3+ engine
