

MR2 Parts required

Posted by Vegantune - 2017/05/02 22:55

Hi I'm looking for a set of the copper heater pipes that Run down the centre of the tunnel. The fuel tank sits under them. Does anyone have a set available please .image enclosed. Thanks

Dont bother with them pipes take them out and throw them away, if you decide to buy secondhand ones its only a matter of time before they leak too.

Here is a permanent fix for you, take the long stainless steel pipes running under the fuel tank and cut a hole in them just where the fuel tank ends and weld on 2 smaller pipes which you can fit hoses to, extend them hoses up through that hole in front of fuel tank and into the heater rad in the frunk.

Thanks thats a good idea. Although I might opt for the hydraulic grade flexible pipe conversion marketed by mrben. Many thanks for your reply
